INTRODUCTION

Information given on specimen sheets

The specimen sheets in these books show sizes of type to be cast from three classes of matrix: 1. Composition; 2. Large Composition; 3. Display. In the case of Large Composition and Display sizes, the class is indicated above each size of type. Composition and Large Composition matrices are arranged in the matrix-case according to the unit values of the characters comprising the fount. This allocation of unit values to the characters in a fount is identified by a Unit Arrangement (U.A.) number which is shown above each Composition or Large Composition size.

In addition to the point size of the fount, the smallest Didot (continental standard) body upon which it can be cast is stated. (In the case of sizes cut primarily to be cast on Didot bodies, the point size upon which it has been cast is given.) Where long or short descenders have been incorporated the fount size corresponds with the size of the non-descending characters which are the same as in a fount with normal descenders. The smallest body size upon which they can be cast is also indicated.

Information about the size of type is followed by the 'set', indicating the normal wedge and justification scale to be used with it. Lastly the alignment is given. In Composition sizes, this is the matrix alignment, i.e. the distance between the top edge of the *matrix* to the base line of the capital letter H. In Large Composition and Display sizes, the figure given is for the type alignment, i.e. the distance between the top edge of the *cast type* and the base line of the capital letter H. In the case of sizes cut primarily to be cast on Didot bodies, the alignment given is for the Didot size and not for the quoted point size on which it has been cast.

Kinds of matrices

Composition matrices are usually made for point sizes up to and including 14 point or Didot. The matrices generally measure ·2″ × ·2″; they are supplied either singly or in sets, usually of 255 or 272.

Composition matrices can be used for casting type on a Composition Caster or, as sorts, on a Type and Rule Caster or a Super Caster.

Large Composition matrices are made in 14, 16, 18, 20, 22 and 24 point or Didot, and measure ·4″ × ·2″ in the narrower characters and ·4″ × ·4″ in the wider characters.

Type can be cast from Large Composition matrices on a Composition Caster with a Large Composition Attachment, or, as sorts, on a Type and Rule Caster or a Super Caster.

Display matrices are made in sizes 14 to 72 point or Didot. Where facilities exist for a Lending Library, many Display series (complete founts only) are available on loan to users of 'Monotype' machines. (Border matrices are not included in our Lending Libraries. Details of this service are given on another page.)

Sorts, for hand composition, can be cast from Display matrices on a Composition Caster fitted with a Display Attachment in sizes 14 to 36 point or Didot or on a Super Caster in all sizes from 14 to 72 point or Didot.

Rule matrices are made in several weights and combinations. Continuous strips can be cast from these matrices and cut automatically into required lengths.

Rules in sizes 1½ to 12 point or Didot can be cast on a Composition Caster fitted with Display and Lead and Rule Attachments or on a Type and Rule Caster. On a Super Caster, rules can be cast in sizes 1 to 18 point or Didot.

Continuous Strip Border and Dash matrices can be cast only on a Super Caster.

Designation on 'Monotype' Matrices

Matrices for normal founts are stamped with the series number and the point size thus, $\frac{110}{12}$ or Didot size thus, $\frac{556}{6D}$.

Special characters (i.e. characters which do not form part of the normal fount) are stamped on the front with the series number and point size, and on the back with a special number. A dash above the point size (in place of the series number) signifies that the special character does not belong to any specific type series.

Special figures are marked on the front with an F number and the point size thus, $\frac{F330}{11}$.

The matrices of non-Latin founts are marked on the front with the series number and point size and on the back with the number allotted to the character.

Border matrices are stamped on the front with the point size and BA or BD according to whether the matrices are to be cast on the Anglo-American point system or the Didot system. Thus $\frac{BA}{6}$ or $\frac{BD}{6}$. On the back of the matrix is stamped the number of the Border design.

Display matrices are stamped with the series number, the point size and also a figure indicating the width in points to which the character is to be cast thus, $\frac{262}{18\ 9\frac{1}{2}}$. If the matrix is a special character, it will bear its appropriate number on the opposite side.

The set-mark matrix is stamped on the front with the series number and point size (as in normal Composition matrices) and with Pt., D or E. these designations signify whether the matrices of the fount are to be cast on the Anglo-American point system, the Didot system or the Old English body system, respectively. Where the set-mark is designed to be cast on a unit value other than 18 units, the unit value is also stamped on the front.

Note: The special numbers should be read starting from the cone hole end of the composition matrix.

Ordering of matrices

When Large or Small Composition matrices are ordered, the series number, point size and, where possible and applicable, the Matrix-case Arrangement (M.C.A.) to be used should be quoted.

When display matrices are ordered the point size and series number should be quoted. When border matrices are ordered the point size and border number should be quoted. For special characters, i.e. characters not forming part of a fount, the reference number, if known, should be quoted.

Orders for rule matrices should quote the designation which appears above them in the Specimen Book. When ordering rule matrices for use on a Composition Caster fitted with Display and Lead and Rule Attachments or a Type and Rule Caster, add A to the designation. When 1½ to 3 point rules are ordered for the Super Caster, state whether ·03″ or ·015″ drive is required.

Special matrices to order

Quotations are given on request. When special matrices are ordered, the following details should be supplied:

a) The point size.
b) The unit width.
c) The fount with which the new character is to be used.
d) A drawing (or an unworn type, if available) and the weight of the new character (using the thick and thin stroke of an existing type design or giving the dimensions of the strokes in points).
e) Where a drawing is to be considerably reduced, state whether the detail may be simplified.
f) If the face of the new character is to be "full face" or to overhang the body, this should be stated.

INTRODUCTION

Ce que vous trouverez dans ces spécimens

Les spécimens de ce catalogue comportent des exemples réalisés dans différents corps et fondus à partir de trois catégories de matrices: (1) Composition; (2) «Composition gros corps» (large composition); (3) «Gros corps» (Display). Ces deux dernières catégories sont différenciées sur les spécimens par les mentions «Large Composition» et «Display». Les matrices «composition» et «composition gros corps» sont disposées dans le châssis porte-matrices en fonction des valeurs en unités de chaque signe constituant le jeu. La répartition des valeurs en unités d'un jeu de matrices déterminé se réfère à un «Arrangement d'unités» (Unit arrangement ou U.A.) dont le numéro est précisé pour chaque corps ou, en tête du feuillet, pour l'ensemble des matrices composition de la série; (ce numéro d'arrangement d'unités permettant la sélection du dispositif à utiliser au clavier et à la fondeuse-composeuse).

En plus de la force de corps généralement exprimée en points anglais, on trouvera entre parenthèses la valeur du plus petit corps en points Didot sur lequel les caractères peuvent être fondus. (Lorsqu'il s'agit de matrices gravées sur valeur Didot, le corps indiqué en points anglais est celui ayant été utilisé pour le texte figurant sur le spécimen). Lorsque des corps avec lettres à descendantes longues ou courtes sont présentées («long descenders» ou «short descenders») l'indication de corps est basée sur celle des lettres courtes reprises sans modification aucune de la série avec descendantes standard. Le plus petit corps sur lequel les caractères peuvent être fondus est également indiqué.

La force de corps est suivie par le coefficient de chasse ou «set» qui détermine le coin et le tambour de justification à utiliser. Le dernier renseignement est celui de l'alignement (Line). Pour les petits corps, il s'agit de l'alignement de la matrice (Line M), c'est-à-dire de la distance qui sépare le bord supérieur de celle-ci du pied d'une lettre capitale. Les chiffres indiqués pour les matrices «composition gros corps» et les matrices «gros corps» se rapportent à l'alignement du caractère (Line T) c'est-à-dire à la distance comprise entre le bord supérieur du caractère et le pied d'une lettre capitale. Dans le cas des matrices gravées sur valeur Didot, l'alignement a été déterminé sur la base du corps Didot et non du corps en points anglais sur lequel elles peuvent être fondues.

Catégories de matrices

Les matrices dites «composition» sont en règle générale destinées à la fonte des caractères jusqu'au 12 et parfois même 14 points (Système Didot ou Anglais). Ces matrices mesurent généralement .2 de pouce (deux dixièmes de pouce) au carré.

Les matrices composition peuvent être utilisées pour la fonte des textes ou des sortes sur la fondeuse-composeuse et pour la fonte des sortes sur la Supra ou sur la fondeuse Display (Carfilint). Les matrices «composition gros corps» sont fabriquées en 14, 16, 18, 20, 22 et 24 points anglais ou Didot, et mesurent .4 × .2 de pouce pour les signes les plus étroits, et .4 × .4 de pouce pour les autres. Elles peuvent être utilisées sur une fondeuse-composeuse équipée d'un dispositif spécial, ou, pour la fonte des sortes, sur une Supra ou sur une fondeuse Display.

Les matrices gros corps qui mesurent 1 pouce au carré ou $1\frac{1}{8}$ de pouce au-dessus du corps 18 sont destinées à la fonte des caractères de 14 à 72 points (Système anglais ou Didot). De nombreux pays disposent d'un service de location de jeux de matrices gros corps mis à la disposition des utilisateurs de machines «Monotype». Tous les détails concernant ce service ainsi que ses conditions d'utilisation peuvent être obtenus sur demande auprès de l'organisation «Monotype» de chaque pays.

Les caractères destinés à la composition manuelle peuvent être fondus à partir de matrices gros corps entre 14 et 36 points anglais ou Didot sur une fondeuse-composeuse équipée de l'appareil gros corps et du corps 14 au corps 72 points anglais ou Didot sur une fondeuse Supra.

Les matrices filets existent dans une gamme très variée de corps, de graisses et d'oeils. Elles permettent d'obtenir tous produits en lames à la dimension voulue.

Les filets compris entre $1\frac{1}{2}$ et 12 points Anglais ou Didot peuvent être produits sur une fondeuse-composeuse équipée des appareils gros corps et filets-interlignes ou sur une fondeuse Display. La Supra permet d'obtenir des filets de 1 à 18 points Anglais ou Didot. La fonte des matrices bordures continues et filets anglais ne peut se faire que sur une fondeuse Supra.

Indications portées sur les matrices «Monotype»

Les matrices destinées à la composition portent gravés sur un côté le numéro de la série et le corps, par exemple: $^{262}_{8}$ s'il s'agit de points anglais ou: $^{262}_{8D}$ s'il s'agit de points Didot.

La matrice étalon de set (étoile) comporte également, en plus, du numéro de série et du corps la mention Pt., D. ou E. Ces lettres indiquent si le jeu de matrices correspondant a été gravé sur la base du système anglo-américain (Pt), Didot (D) ou Anglais ancien système (E). Lorsque la matrice étalon de set est prévue pour une fonte sur une valeur autre que 18 unités, cette valeur est également indiquée sur la matrice.

Les matrices spéciales (c'est-à-dire celles qui ne font pas partie du jeu standard) comportent en plus de l'indication de la série et du corps une référence chiffrée portée sur le côté opposé. Un tiret surmontant l'indication du corps et figurant en place du numéro de série signifie que le signe n'est rattaché à aucune série particulière.

Les matrices de chiffres spéciaux sont marquées de la lettre F, d'un chiffre de référence, et de la force de corps, soit, par exemple: $^{F2}_{10}14$. Les matrices des langues orientales sont marquées de la même façon que les matrices composition (série et corps sur un côté) mais comportent en plus sur le côté opposé un numéro de référence spécial par caractère gravé.

Les matrices vignettes sont repérables grâce à l'indication du corps précédée de BA ou BD selon qu'elles sont basées sur le système anglo-américain ou Didot: $^{BA}_{6}$ ou $^{BD}_{6}$. Sur l'autre côté se trouve le numéro de référence de la vignette.

Les matrices gros corps portent le numéro de la série, le corps, et également un chiffre indiquant en points la chasse sur laquelle le caractère doit être fondu, soit $^{762}_{18\ 9\frac{1}{2}}$.

S'il s'agit d'un signe spécial, il portera un numéro de référence sur le côté opposé.

Note: Les chiffres de référence des matrices spéciales se liront toujours en regardant la matrice le cône tourné vers la gauche.

Les renseignements à indiquer sur une commande de matrices

Une commande de matrices «composition» ou «composition gros corps» doit bien entendu comporter le numéro de la série, le corps, le set et si possible, le numéro de dispositif utilisé (M.C.A.). Pour les matrices gros corps (Display), indiquer la série et le corps, et pour les vignettes, le corps et la référence du dessin. En ce qui concerne les caractères spéciaux, c'est-à-dire ceux qui ne font pas partie des jeux standard, leur numéro de référence, s'il est connu, doit être précisé.

Les commandes de matrices filets devront mentionner la référence indiquée au-dessus du spécimen. En outre, il est indispensable d'ajouter la lettre «A» après l'indication de la référence de la matrice filet si celle-ci est destinée a être utilisée sur une fondeuse-composeuse équipée de l'appareil «filets et interlignes» ou sur une fondeuse Display (Carfilint). Dans le cas d'une commande de matrices filets de $1\frac{1}{2}$ à 3 points destinées à la fondeuse Supra, il est possible de les fournir sur demande avec une profondeur d'oeil de .015″ au lieu de .030″.

Gravures spéciales

Toute demande de fabrication de matrices spéciales qui peut, sur simple demande faire l'objet d'un devis, doit être accompagnée des précisions suivantes.

a) Le corps et le set.
b) La valeur en unités.
c) La série avec laquelle le nouveau signe sera utilisé.
d) Un dessin (ou un caractère en bon état) et une indication précise quant à sa graisse. (Utiliser comme base de référence le plein et le délié d'une série existante, ou donner les dimensions de leur épaisseur.)
e) Lorsqu'un original doit être considérablement réduit, indiquer si certains détails peuvent être simplifiés ou omis.
f) Dans le cas d'un caractère destiné à être fondu «plein oeil» indiquer si cet oeil peut déborder ou non.

Tous renseignements complémentaires peuvent être obtenus auprès de l'organisation «Monotype» de votre pays.

EINFÜHRUNG

Angaben auf den Musterblättern

Die Musterblätter dieses Buches zeigen Schriftgrößen, die mit drei Matrizenarten gegossen werden: (1) Kleinkegelsatzmatrizen; (2) Großkegelsatzmatrizen (Large Composition); (3) Großkegelmatrizen (Display Matrices). Großkegelsatz- und Großkegelmatrizen sind durch entsprechende Hinweise über den abgebildeten Musterzeilen gekennzeichnet. Kleinkegelsatz- und Großkegelsatzmatrizen werden gemäß den Einheitenwerten der Charaktere in einem Matrizenrahmen verlegt. Über die Einteilung der Einheitenwerte einer Schrift gibt die Nummer des Einheitenarrangements (Unit Arrangement, abgekürzt U.A.) Auskunft (z.B. U.A. 43); sie ist über jeder Kleinkegelsatz- bzw. Großkegelsatzgröße angegeben.

Außer der (englischen) Pointgröße der Schrift ist auch der kleinste (auf dem europäischen Kontinent gebräuchliche) Didotkegel angegeben, auf den sie gegossen werden kann. Umgekehrt ist der Pointkegel (des englischen Maßsystems) genannt, wenn die Schrift ursprünglich speziell für Didotkegel geschnitten wurde. Bei Schriftschnitten mit langen, kurzen und normalen Unterlängen stimmen die Höhen der Mittellängen überein. Die kleinste Kegelgröße, auf die sie gegossen werden können, ist ebenfalls verzeichnet.

Der Information über die Größe der Schrift folgt die «Set»-Angabe, die anzeigt, welche Stärke des Setkeils und welche Ausschließtrommel zu verwenden ist. Schließlich folgt noch die Angabe über die Linie. Für Kleinkegelmatrizen ist es die Matrizenlinie, und zwar der Abstand von der Oberkante der Matrize bis zur Grundlinie des Versalbuchstabens «H». Bei Großkegelsatz- und Großkegelmatrizen stellt die angegebene Zahl die Schriftlinie dar; es ist der Abstand von der Oberkante des gegossenen Typenkörpers bis zur Grundlinie des Versalbuchstabens «H». Für Schriftgrößen, die ursprünglich für den Guß auf Didotkegeln geschnitten wurden, bezieht sich die Linienangabe auf Didot und nicht auf die angegebene (englische) Pointgröße, auf der die Schrift ebenfalls gegossen werden kann.

Matrizenarten

Kleinkegelmatrizen werden normalerweise für Schriftgrößen bis einschließlich 14 Point oder 14 Didot hergestellt. Diese Matrizen haben allgemein das Maß von 0,2″ × 0,2″.

Kleinkegelmatrizen sind auf einer «Monotype» Gießsetzmaschine zur Herstellung von Fließsatz und auf der «Monotype» Supra-Komplett-gießmaschine zum Guß von Kastenschrift (Defekte) zu verwenden.

Großkegelsatzmatrizen werden für 14, 16, 18, 20, 22 und 24 Point oder Didot hergestellt; sie messen 0,4″ × 0,2″ bei schmalen und 0,4″ × 0,4″ bei den breiten Charakteren.

Fließsatz von Großkegelsatzmatrizen ist auf einer «Monotype» Gießsetzmaschine zu gießen, die mit der Großkegelsatz-Vorrichtung ausgerüstet sein muß. Der Abguß von Kastenschrift kann auch auf einer Supra-Komplettgießmaschine erfolgen.

Der Größenbereich der Großkegelmatrizen erstreckt sich von 14 bis 72 Point oder Didot. Zahlreiche Großkegelserien sind auf Leihlager genommen worden und können im Rahmen unseres Leihmatrizensystems an Besitzer von «Monotype» Maschinen ausgeliehen werden. Einzelheiten über diesen Kundendienst ist bei den zuständigen Niederlassungen und Vertretungen zu erfahren.

Defekte und Garnituren für den Handsatz in den Kegelgraden 14 bis 36 Point oder Didot können von Großkegelmatrizen auf einer mit der Sondervorrichtung für Großkegelguß ausgerüsteten Gießsetzmaschine hergestellt werden, während auf einer Supra-Komplettgießmaschine alle Kegelgrade von 14 bis 72 Point oder Didot zu gießen sind.

Linienmatrizen sind in den verschiedensten Stärken und Kombinationen erhältlich. Linien sind in Bahnen oder automatisch auf bestimmte Längen geschnitten abzugießen.

Linien in den Kegelstärken von 1½ bis 12 Point oder Didot lassen sich auf einer Gießsetzmaschine mit Hilfe der Sondervorrichtung für Linien- und Reglettenguß gießen. Auf der Supra-Komplettgießmaschine sind dagegen Linien von 1 bis 18 Point oder Didot herzustellen.

Reiheneinfassungs- und Schlußlinienmatrizen können nur auf der Supra-Komplettgießmaschine verwendet werden.

Kennzeichnung von «Monotype» Matrizen

In Matrizen für normale Schriften sind jeweils die Seriennummer und die Pointgröße $\frac{110}{12}$ oder Didotgröße $\frac{556}{6D}$ eingeprägt.

Spezialziffern sind auf der Vorderseite mit einer F-Nummer und der Kegelgröße, wie beispielsweise $\frac{F238}{11}$, signiert.

Die Matrizen nicht-lateinischer Schriften sind auf der Vorderseite mit der Seriennummer und Kegelgröße und auf der Rückseite mit der Nummer signiert, die den Charakter kennzeichnet.

Schmuck- und Einfassungsmatrizen sind vorn mit der Kegelgröße und den Kennbuchstaben BA oder BD signiert. Diese Signierungen sind die Kennzeichnung für den Guß auf Kegeln des anglo-amerikanischen $\frac{BA}{6}$ oder des Didotsystems $\frac{BD}{6}$. Auf der Rückseite der Matrize ist die Kenn-Nummer der Einfassung eingestanzt.

Großkegelmatrizen tragen die Seriennummer, die Punktgröße und auch eine Zahl eingestanzt, welche die Dicke angibt, auf die der Charakter zu gießen ist, beispielsweise $\frac{262}{18}\ 9\frac{1}{2}$. Handelt es sich bei der Matrize um einen Spezialcharakter, so befindet sich dessen Nummer auf der Gegenseite.

Spezialcharaktere tragen auf der Vorderseite die Seriennummer und Point- bzw. Didotgröße und auf der Rückseite die Spezialnummer. Ein waagerechter Strich oberhalb der Größenangabe anstatt der Serienbezeichnung zeigt an, daß der Spezialcharakter allgemein zu verwenden ist.

Anmerkung: Zur Vermeidung von Irrtümern sind die Spezialnummern vom Konuslochende der Kleinkegelmatrize aus zu lesen.

Matrizenbestellungen

Bei der Bestellung von Klein- oder Großkegelsatzmatrizen sind die Seriennummer, Kegelgröße und möglichst auch das Matrizenrahmen-Arrangement (M.C.A.), nach dem die Matrizen verlegt werden sollen, anzugeben.

Im Fall der Bestellung von Großkegelmatrizen ist die Angabe der Punktgröße sowie Seriennummer und bei Einfassungsmatrizen die der Kegelgröße und der Nummer der Einfassung erforderlich.

Für Spezialcharaktere, die nicht zu einer Schrift gehören, ist die Angabe der Referenznummer erwünscht, soweit diese bekannt ist.

Bestellungen für Linienmatrizen sollten die Kennzeichnung enthalten, die oberhalb der im Musterbuch abgebildeten Linie steht. Handelt es sich bei den zu bestellenden Linienmatrizen um solche, die auf einer Gießsetzmaschine mit den Sondervorrichtungen für den Großkegel- sowie Linien- und Reglettenguß verwendet werden sollen, ist der Kennzeichnung ein A zuzufügen.

Aufträge auf Anfertigung von Spezialmatrizen (Neuschnitte)

Angebote werden auf Anfrage abgegeben. Bei Auftragserteilung von Spezialmatrizen ist die Bekanntgabe folgender Einzelheiten notwendig:

a) die Kegelgröße;
b) die Dicke in Einheiten;
c) die Schrift, mit der der neue Charakter verwendet werden soll;
d) eine Zeichnung oder, wenn greifbar, eine unbeschädigte Type oder Angaben zur Bildstärke des gewünschten Charakters;
e) bei Zeichnungen, die beträchtlich verkleinert werden müssen, wird um Angabe gebeten, ob das Charakteristikum den normalen Verhältnissen angepaßt werden darf;
f) falls ein Zeichen zu sich selbst oder zu einem anderen Zeichen Anschluß haben soll (z.B. chemischer Formelsatz), muß ein entsprechender Hinweis gegeben werden.

INLEIDING

Gegevens voorkomend op proefbladen

De proefbladen in deze boeken tonen beeldgrootten die van drie categorieën matrijzen worden gegoten: (1) Zetsel; (2) Grootcorpszetsel; (3) Grootcorps. Bij grootcorpszetsel en grootcorps beeldgrootten, wordt de categorie aangegeven met respectievelijk 'Large Composition' en 'Display' boven elke beeldgrootte. Zetselmatrijzen en grootcorps zetselmatrijzen worden in het matrijzenraam gerangschikt volgens de eenhedenwaarden van de letters die het stel vormen. Welke eenheden-indeling er aan een serie is toegekend, kan men zien aan een eenheden-schemanummer (U.A.) dat boven elke zetsel- of grootcorpszetsel beeldgrootte staat vermeld. Behalve de Engelse beeldgrootte van het stel wordt ook het kleinste Didot corps waarop kan worden gegoten, aangegeven. (Voor beeldgrootten die in de eerste plaats zijn gesneden om op Didot corpsen te worden gegoten, wordt tevens aangegeven op welk Engels corps ze zijn gegoten.) Wanneer er lange of korte staartletters in een stel zijn opgenomen, correspondeert de beeldgrootte van het stel met de grootte van het stel met de normale stokletters. Het kleinste corps waarop kan worden gegoten, wordt eveneens vermeld. De gegevens over de beeldgrootte worden gevolgd door het 'set', dat de letterwig en uitvultrommel aanduidt die men erbij moet gebruiken. Tot slot wordt de lijning aangegeven. Voor normale zetselgrootten is dit de matrijzenlijning, d.w.z. de afstand van de bovenrand van de *matrijs* tot de basislijn van de kapitale letter H. Bij grootcorpszetsel en grootcorps beeldgrootten geeft het getal de letterlijning aan, dat wil zeggen de afstand tussen de bovenrand van de *gegoten letterkegel* en de basislijn van de kapitale letter H. Voor beeldgrootten die in de eerste plaats zijn gesneden om op Didot corpsen te worden gegoten, geldt de aangegeven lijning voor het Didot corps en niet voor de Engelse letterkegel waarop werd gegoten.

Soorten matrijzen

Zetselmatrijzen worden gewoonlijk voor Engelse en Didot corpsen t.e.m. 14 punt gemaakt. De matrijzen zijn meestal 0.2″ × 0.2″; zij worden los of in stellen geleverd, veelal voor matrijzenraam-indelingen van 225, 255 of 272 stuks. Zetselmatrijzen kan men gebruiken om er letter van te gieten op een zetselgietmachine of, voor de kast, op een smoutletter- en lijnengietmachine of een Supra gietmachine.

Grootcorps zetselmatrijzen worden gemaakt voor de Engelse of Didot corpsen 14, 16, 18, 20, 22 en 24 punt en de afmetingen zijn 0.4″ × 0.2″ voor de smallere letters en 0.4″ × 0.4″ voor de bredere letters. Van grootcorps zetselmatrijzen kan letter worden gegoten op een zetselgietmachine uitgerust met een grootcorps zetselapparaat of, voor de kast, op een smoutletter- en lijnengietmachine of een Supra gietmachine.

Grootcorps matrijzen worden gemaakt voor de Engelse of Didot corpsen 14 tot 72 punt. Waar een huurvoorraad kan worden aangehouden, staan veel grootcorps series (alleen complete stellen) beschikbaar voor verhuur aan gebruikers van 'Monotype' machines. (Ornamentmatrijzen zijn niet in de huurvoorraad opgenomen. Van de huurvoorraad bestaat een afzonderlijk prospectus.) Kastletter, voor handzetsel, kan van grootcorps matrijzen worden gegoten op een zetselgietmachine voorzien van grootcorpsapparaat voor de Engelse of Didot corpsen 14 tot 36 punt, of op een Supra gietmachine voor alle Engelse of Didot corpsen van 14 tot 72 punt.

Lijnmatrijzen worden voor verschillende beelddikten en combinaties gemaakt. Er kunnen van deze matrijzen banen worden gegoten die automatisch op de verlangde lengten worden afgekapt. Er kunnen op een zetselgietmachine die is uitgerust met apparaten voor grootcorps, lijnen en interlinies, of op een smoutletter- en lijnengietmachine lijnen worden gegoten voor de Engelse of Didot corpsen 1½ tot 12 punt. Op een Supra gietmachine kan men lijnen gieten voor de Engelse of Didot corpsen 1 tot 18 punt. Lijnrand- en filetmatrijzen kunnen alleen op een Supra gietmachine worden gegoten.

Stempeling op 'Monotype' matrijzen

Matrijzen voor normale stellen zijn gestempeld met het serienummer en het Engelse corps, dus $\frac{110}{12}$ of Didot corps, dus $\frac{556}{6D}$. Op de 'ster' matrijs is aan de voorzijde het serienummer en corps ingestempeld (als bij normale zetselmatrijzen) met Pt, D of E. Deze stempeling geeft aan of het stel moet worden gegoten op respectievelijk het Anglo/Amerikaanse puntenstelsel, het Didot stelsel of het Oud-Engelse puntenstelsel. Als de 'ster'matrijs is gemaakt om op een andere eenhedendikte dan 18 eenheden te worden gegoten, wordt ook de eenhedenwaarde aan de voorkant ingestempeld. Speciale letters (d.w.z. letters die geen deel uitmaken van een normale serie) worden aan de voorzijde gestempeld met het serienummer en het corps en aan de achterkant met een speciaal nummer. Een streepje boven het corps (inplaats van het serienummer) geeft aan dat de speciale letter niet tot een bepaalde letterserie behoort. Speciale cijfers zijn aan de voorkant gemerkt met een F-nummer en het corps, dus $\frac{F338}{11}$. De matrijzen van niet-Latijnse letterseries zijn aan de voorzijde gemerkt met het serienummer en corps en aan de achterkant met het nummer dat aan de letter is gegeven. Ornamentmatrijzen zijn aan de voorkant gestempeld met het corps en BA of BD, al naar gelang de matrijzen dienen te worden gegoten volgens het Anglo/Amerikaanse puntenstelsel of het Didot puntenstelsel. Dus $\frac{BA}{6}$ of $\frac{BD}{6}$. Aan de achterkant van de matrijs is het nummer van het ornament ingestempeld. Grootcorps matrijzen zijn gestempeld met het serienummer, het corps en ook een getal dat in Engelse punten de breedte aangeeft waarop de letter moet worden gegoten, dus $\frac{262}{18}\ 9\frac{1}{2}$. Is het een matrijs met een speciale letter, dan staat het nummer hiervan aan de andere kant.

N.B. De speciale nummers moet men lezen vanaf de zijde van het conische gat van de zetselmatrijzen.

Het bestellen van matrijzen

Wanneer er grootcorps of kleincorps zetselmatrijzen worden besteld, moeten het serienummer, corps en zo mogelijk en indien van toepassing, de matrijzenraamindeling (M.C.A.) die men gaat gebruiken, opgegeven worden. Indien er grootcorps matrijzen worden besteld, dienen corps en serienummer te worden vermeld. Bestelt men ornamentmatrijzen, dan corps en nummer van het ornament opgeven. Voor speciale letters, d.w.z. letters die geen deel uitmaken van een serie, moet het referentienummer, als men dit kent, worden vermeld. Op orders voor lijnmatrijzen het nummer plaatsen dat er in het proevenboek bij staat. Worden lijnmatrijzen besteld om te worden gebruikt op een zetselgietmachine die is uitgerust met de apparaten voor het gieten van grootcorps letter, lijnen en interlinies, dan A toevoegen aan het nummer. Indien er 1½ tot 3 punts lijnmatrijzen worden besteld voor de Supra gietmachine, opgeven of ze voor 0.03″ of 0.015″ diepte moeten zijn.

Aanmaak van speciale matrijzen

Op verzoek wordt prijsopgave gezonden. Bestelt men speciale matrijzen, dan dienen de volgende gegevens te worden verstrekt:

a. Het corps.
b. De eenhedendikte.
c. De serie waarbij de nieuwe letter moet worden gebruikt.
d. Een tekening (of een niet afgeronden letter indien deze beschikbaar is) en de vetheid van de nieuwe letter (waarbij de dikte of dunne halen van een bestaand lettertype kunnen worden aangehouden of de afmetingen van de halen in punten worden aangegeven).
e. Wanneer een tekening belangrijk moet worden verkleind, aangeven of de details vereenvoudigd mogen worden.
f. Indien het beeld van de nieuwe letter 'vol op corps' moet zijn of overhangend op de kegel, dient dit te worden opgegeven.

INLEDNING

Matrisdata

Stilprovsbladen visar typgraderna för tre olika matrissorter: (1) Satsmatriser, (2) Storkägelmatriser, (3) »Display»-matriser. Vid storkägelsats och »Display»-matriser anges matrissorten ovanför graden. Satsmatriser och storkägelmatriser är ordnade i matrisram enligt enhetsvärdena på de tecken som ingår i stilen. Enhetsvärdena på tecknen i en stil ges genom ett enhetsarrangemang-nummer (U.A.) ovanför varje satsmatris-eller storkägelmatris-grad.

Förutom graden anges även den minsta Didotkägel som matrisen kan gjutas på. (När det gäller grader som främst avses för gjutning på Didotkägel anges den stilgrad på vilken de gjutits.)

Uppgiften om typgrad följs av setvärdet, som anger vilken setkil och utslutningstrumma som skall användas. Slutligen anges matrislinjen, dvs. avståndet mellan övre sidan på *matriskroppen* till underkanten på versala H. Beträffande storkägelmatriser och »Display»-matriser gäller det angivna värdet typlinjen, dvs. avståndet mellan övre kanten på *den gjutna typen* och underkanten på versala H. Vid grader som i första hand är avsedda för gjutning på Didotkägel gäller linjeringsvärdet Didotstorleken och inte den angivna »point»-storleken som den gjutits på.

Olika matriser

Satsmatriser görs vanligen i typgrader t.o.m. 14 punkter. Matriserna är 0,2″×0,2″ och kan levereras styckvis eller i hela satser.

Satsmatriser kan användas för gjutning av typer i en satsgjutmaskin eller, om det gäller handstil, i en stilgjutmaskin eller Supra komplettgjutmaskin.

Storkägelmatriser görs i typstorlekarna 14, 16, 18, 20, 22 och 24 punkter. Matriserna tillverkas i två storlekar, 0,2″×0,4″ och 0,4″×0,4″.

Gjutning från storkägelmatriser kan ske i en satsgjutmaskin med storkägelaggregat eller, om det gäller handstil, i en stil- och linjegjutmaskin eller Supra komplettgjutmaskin. »Display»-matriser omfattar graderna 14-72 punkter.

Stil för handsättning kan gjutas från »Display»-matriser i en satsgjutmaskin med storkägelaggregat i graderna 14-36 punkter eller i en Supra komplettgjutmaskin i alla storlekar från 14 till 72 punkter.

Linjematriser finns med flera olika gravyrer och kombinationer. Ändlösa linjer kan gjutas med dessa matriser och kapas automatiskt i önskade längder.

Linjer på 1½-12 punkter kan gjutas i en satsgjutmaskin med storkägel- och linje-och reglettutrustning eller i en stilgjutmaskin med samma utrustning. I en Supra komplettgjutmaskin kan linjer och reglettter i typgraderna 1-18 punkter gjutas. Ändlösa ornament (Border) kan endast gjutas i en Supra komplettgjutmaskin.

Märkningen av »Monotype» matriser

Vanliga satsmatriser är märkta serienummer och grad t.ex. $\frac{110}{12}$ eller Didot, t.ex. $\frac{556}{6D}$.

Specialsiffror är märkta på framsidan med ett F-nummer och grad, t.ex. $\frac{F238}{11}$.

Matriser för Ryska, Arabiska m.m. är märkta på framsidan med serienummer och grad och på baksidan med tecknets nummer.

Ornamentmatriser är märkta på framsidan med grad och BA eller BD beroende på om matriserna skall gjutas med Pica system eller Didot. Ex.: $\frac{BA}{6}$ eller $\frac{BD}{6}$. På baksidan av matrisen finns numret på gravyrbilden.

»Display»-matriser är märkta med serienummer, grad och en siffra, som anger den bredd i engelska punkter som matrisen skall gjutas på, t.ex. $\frac{262}{18}$ 9½. Om matrisen är ett specialtecken har den dessutom detta nummer på baksidan.

Specialtecken (dvs. tecken som vanligen inte ingår i en sats) är märkta på framsidan med serienummer och grad och på baksidan finns ett specialnummer. En punkt ovanför graden (på serienumrets plats) innebär att specialtecknet inte tillhör något särskild typsnitt.
Obs.: Specialnumret skall läsas med början från konhålssidan av satsmatrisen.

Beställning av matriser

När storkägel- eller satsmatriser beställs skall serienummer, grad, setvärde och, där så är möjligt och behövligt, matrisramsinläggning (M.C.A.) anges.

Då »Display»-matriser beställs skall grad och serienummer anges. För ornamentmatriser gäller att grad och nummer skall uppges. För specialtecken är vi tacksamma om referensnummer kan erhållas.

Beställningar av linjematriser skall uppta beteckningen som finns ovanför matrisen i stilprovboken. Vid beställning av linjematriser till en satsgjutmaskin eller stilgjutmaskin med speciell tillsats läggs ett A till beteckningen. För beställning av 1½-3 punkters linjer och regletter till Supra komplettgjutmaskin anges om 0,03″ eller 0,015″ gravyrdjup önskas.

Beställning av matrisskärning

Kostnadsförslag lämnas på begäran. Följande uppgifter bör lämnas vid beställningen:

a) Grad.
b) Enhetsvärde.
c) vilken stil det nya tecknet skall användas tillsammans med.
d) en skiss med utförliga uppgifter om dimensioner osv.
e) Om ett original skall förminskas avsevärt anges huruvida detaljerna får förenklas.
f) Om det nya tecknet skall täcka hela kägeln eller om överhäng önskas måste även detta anges.

INTRODUCCION

Datos que aparecen en las hojas Muestrario

Las hojas muestrario que aparecen en este libro, muestran los cuerpos a que han de fundirse las matrices dentro de las tres clases en que éstas se dividen: (1) matrices de composición normales; (2) matrices de titulares para composición; (3) matrices para titulares. En el caso de las matrices de titulares para composición, y titulares, su condición se indica sobre cada cuerpo. Las matrices de composición normal y composición de titulares, van en un cuadro portamatriz, de acuerdo con el valor de unidades de los caracteres que comprende la familia. La colocación de los valores de unidades en los caracteres de una familia, se indica por el Unit Arrangement (U.A.) cuyo número aparece encima de los cuerpos de composición normal y composición de titulares.

Además del cuerpo en puntos, se indica también el cuerpo en Didot sobre el cual pueden fundirse. En el caso de que las matrices hayan sido originalmente grabadas para fundirse en cuerpos Didot, el cuerpo en puntos en el que ha sido fundido, también se hace constar. Cuando en algunas matrices existen rasgos descendentes cortos o largos, el tamaño de la familia corresponde al tamaño de caracteres normales que son los mismos como en una familia con rasgos descendentes normales. El cuerpo más pequeño a que pueden fundirse, también se indica.

La información acerca del tamaño del tipo, es seguida por el «Set», indicando la cuña normal y tambor de justificación que debe utilizarse con él. Por último se da la alineación. En tamaños de composición normal, la alineación es la distancia entre el borde superior de la matriz y la línea base de una letra mayúscula H. En matrices de composición de titulares y titulares, la cifra dada es para la alineación, es decir, la distancia entre el borde superior del tipo fundido y la línea base de la letra mayúscula H. En el caso de cuerpos originalmente grabados para fundir en cuerpos Didot, la alineación dada es para el tamaño Didot y no para el tamaño en puntos en el cual ha sido fundido.

Clase de matrices

Las matrices de composición normal son usualmente fabricadas para cuerpos hasta 14 puntos o Didot. Estas matrices generalmente miden 0.2″ × 0.2″ y se suministran bien, sueltas, o en juegos completos, de acuerdo con los cuadros de que se disponga de 225, 255, o 272 matrices. Las matrices de composición pueden ser utilizadas para fundirlas en una máquina de componer o bien en una máquina de titulares que funde rayas y tipo suelto, para rellenar cajas y, por último, en una máquina Supra.

Las matrices de composición de titulares se fabrican en los cuerpos 14, 16, 18, 20, 22 y 24 puntos o Didot y su tamaño es de 0.4″ × 0.2″ en los caracteres más estrechos, y en 0.4″ × 0.4″ en los caracteres más anchos.

Las matrices de composición de titulares también pueden fundirse en una máquina de componer con el dispositivo correspondiente, o bien como tipo suelto para rellenar cajas en una máquina de titulares de fundir rayas y Tipo y en una Supra.

Las matrices para titulares se fabrican de 14 a 72 puntos o Didot. Estas matrices existen en alquiler en varias familias (solamente familias completas) por lo que en aquellos lugares donde existen estos servicios, pueden ser utilizadas a un precio módico por los usuarios de nuestras máquinas. Orlas no existen en nuestros servicios de alquiler de matrices, con algunas excepciones. Detalles de estos servicios se dan en otra página.

Suertes para composición a mano pueden ser fundidas con matrices de titulares en una máquina de componer que disponga del dispositivo para tal servicio. El tamaño que puede fundirse en esta máquina es solamente de 14 a 36 puntos o Didot. En una fundidora Supra pueden fundirse todos los tamaños de matrices para titulares del 14 al 72.

Matrices para rayas

Estas se fabrican en diversas manchas y combinaciones. Con estas matrices pueden fundirse rayas en tiras o cortadas automáticamente a la medida deseada.

Rayas en tamaños de 1½ a 12 puntos o Didot para fundirse en una máquina de componer que esté equipada con el dispositivo de rayas y regletas así como también en una fundidora especial de titulares.

En una máquina Supra puede fundirse este material de 1 a 18 puntos o Didot.

Orlas continuas y plecas pueden fundirse solamente en una máquina Supra.

Designación de las matrices «Monotype»

Las matrices de familias normales van estampadas con el número de la serie y el cuerpo en puntos, así $\frac{110}{12}$ o bien en cuerpo Didot, así, $\frac{556}{6D}$.

Las matrices especiales, es decir, aquellos caracteres que no forman parte normalmente de una familia, van estampadas en su parte frontal con el número de la serie y el cuerpo en puntos, y en la parte posterior con un número especial de referencia. Una raya sobre el cuerpo en puntos en lugar del número de la serie, significa que el carácter especial de que se trata no corresponde a una serie específica.

Las numeraciones especiales van marcadas en su parte frontal con una F, el número y el cuerpo, así $\frac{F328}{11}$.

Las matrices de caracteres no latinos, van indicadas en su parte frontal con el número de la serie y cuerpo y en la parte posterior con el número especial dado al caracter de que se trate.

Las matrices de orlas van estampadas en su frente con el cuerpo y con las letras BA o BD, según se trate de matrices a fundir por el sistema de punto anglo-americano o sistema Didot. La estampación de estas matrices es como sigue, $\frac{BA}{6}$ o $\frac{BD}{6}$. En la parte posterior de la matriz lleva estampado el número de referencia de la orla.

Las matrices para titulares llevan estampado el número de la serie, el cuerpo y también el número que indica la anchura en puntos a la cual el carácter debe ser fundido, así, $\frac{262}{18}\ 9\frac{1}{2}$. Si la matriz corresponde a un carácter especial, llevará el número de la designación que corresponde a tal carácter en el lado opuesto.

La anchura del Set va estampada en la parte frontal con el número de la serie y cuerpo en puntos (igual que las matrices de composición normal) y con pt., D o E. Estas marcas significan si las matrices de la familia deben ser fundidas por el sistema de puntos anglo-americano; el sistema Didot o el sistema antiguo inglés, respectivamente. Cuando la anchura del Set es designada para fundirse sobre un valor de unidades diferente a 18 unidades, tal valor de unidades es también indicado en la parte frontal de la matriz.

Los números especiales deben leerse empezando desde el final del agujero cónico de la matriz de composición.

Pedidos de matrices

Cuando se piden matrices para composición normal o composición de titulares, debe indicarse el número de la serie, el cuerpo, el Set y, cuando sea posible, el número del M.C.A (Combinación). Cuando se piden matrices para titulares, el número de la serie y cuerpo debe mencionarse. Para pedir matrices de orlas, debe igualmente indicarse el número de la orla y el cuerpo. Cuando se trate de caracteres especiales, o sea, caracteres que no formen parte normalmente de una familia, debe darse el número de referencia.

Para pedir matrices de rayas, debe indicarse la designación que aparece sobre ellas en la hoja del catálogo. Cuando estas matrices vayan a utilizarse con una máquina de componer equipada con su dispositivo correspondiente, debe de agregarse a la designación la letra A. Cuando se piden matrices de rayas de 1½ a 3 puntos para la máquina Supra, indíquese si la profundidad del ojo debe ser de 0.03″ ó 0.015″.

Pedido de matrices especiales

Damos precio de matrices especiales a petición de nuestros clientes. Cuando se piden estas matrices especiales deben facilitarse los siguientes datos:

a) Cuerpo.
b) Ancho en unidades.
c) La familia con la cual el nuevo carácter ha de ser utilizado.
d) Un dibujo o un tipo nuevo, si se dispone de él, debe ser facilitado así como también la anchura que debe tener el nuevo carácter, utilizando el trazo fino o grueso que ya se posea, o dando las dimensiones del trazo en puntos.
e) Cuando un dibujo ha de ser reducido considerablemente, indíquese si el detalle puede ser simplificado.
f) También debe indicarse si el ojo del nuevo carácter ha de cubrir la totalidad del cuerpo o ha de sobrepasar éste.

INTRODUZIONE

Informazioni sulle pagine di campione

Le pagine di campione in questi campionari indicano i corpi che si possono fondere da tre tipi di matrici: (1) Matrici di composizione normale; (2) Matrici di Larga Composizione; (3) Matrici Display, cioè per sola fusione. Per le matrici di larga composizione e display, il tipo (cioè «larga composizione» o «display») è indicato sopra ogni corpo. Le matrici di composizione normale e di larga composizione sono disposte nel telaio secondo lo spessore o valore di unità delle lettere che formano quel determinato carattere. L'assegnazione dei valori di unità alle lettere di un determinato carattere (per es. serie 135-10) è contraddistinta da un Arrangiamento di Unità (U.A.) il cui numero è indicato sopra ciascun corpo.

Oltre il corpo del carattere, è indicato il più piccolo corpo Didot (cioè di forma Didot in uso sul Continente Europeo) su cui il carattere può essere fuso. Anche quando un carattere ha discendenti lunghi o corti, è indicato il corpo più piccolo su cui esso si può fondere.

Dopo l'indicazione del corpo, vi è l'indicazione del «set» o spessore, che indica il cuneo e il tamburo da usarsi con quel corpo. Per ultimo è dato l'allineamento. Nei corpi di composizione normale, si tratta dell'allineamento della matrice, cioè la distanza dallo spigolo superiore della matrice alla base dall'H maiuscola. Nei corpi di larga composizione e display si tratta dell'allineamento del carattere, cioè la distanza fra lo spigolo superiore del carattere fuso e la base dell'H maiuscola.

Tipi di matrici

Le matrici di composizione normale vanno in genere fino al corpo 14. Esse hanno questa misura: 0.2″ × 0.2″; vengono fornite o separatamente o in gruppi di 225, 255 o 272, che formano gli alfabeti contenuti in telaio.

Le matrici di composizione si possono usare per fondere caratteri su una Fonditrice-Compositrice, oppure per fondere caratteri per casse su macchine unicamente Fonditrici o su macchine Supra.

Le matrici di larga composizione esistono nei corpi 14, 16, 18, 20, 22 e 24 e hanno questa misura: 0.4″ × 0.2″ per i caratteri più stretti, oppure 0·4″ × 0·4″ per i caratteri più larghi.

Si possono fondere caratteri da matrici di larga composizione su una Fonditrice-Compositrice dotata di apparecchio di larga composizione oppure su macchine unicamente Fonditrici o su macchine Supra.

Le matrici Display esistono dal corpo 14 al corpo 72.

Si possono fondere caratteri per composizione a mano da matrici display su una Fonditrice-Compositrice dotata di apparecchio grandi caratteri dal corpo 14 al corpo 36 oppure su macchine Supra in tutti i corpi dal 14 al 72.

Le matrici fili esistono in diversi pesi e disegni. Da queste matrici si fondono fili in lama che si possono tagliare automaticamente nelle giustezze volute.

Si possono fondere fili dal corpo 1½ al corpo 12 su una Fonditrice-Compositrice dotata di Apparecchio Fili e Interlinee e Riduttore di Velocità, oppure su macchine unicamente fonditrici. Sulla Supra si possono fondere fili da 1 punto fino a 18 punti. Soltanto sulla Supra si possono fondere fregi in lama e fuselli.

Indicazione sulle matrici «Monotype»

Le matrici dei caratteri normali portano inciso il numero della serie e il corpo in punti inglesi, così: $^{10}_{12}$; oppure il corpo in punti Didot, così: $^{556}_{8D}$.

I numeri speciali, cioè non di serie, portano inciso sul davanti una F con un numero e sotto il corpo, così: $^{F338}_{11}$.

Le matrici di caratteri non latini portano inciso, davanti, il numero di serie e il corpo e, dietro, il numero assegnato a quella determinata lettera.

Le matrici dei fregi portano inciso, davanti, il corpo e BA oppure BD secondo che il loro occhio sia in punti anglo-americani oppure in punti Didot, così: $^{BA}_{6}$ oppure $^{BD}_{6}$. La matrice porta inciso, dietro, il numero del fregio.

Le matrici Display portano inciso il numero della serie, il corpo e inoltre lo spessore in punti inglesi in cui si deve fondere il carattere, così: $^{262}_{18\ 9}$. Se la matrice Display è un carattere speciale, porta sul retro il suo particolare numero.

I caratteri speciali (cioè quelli che non fanno parte di alfabeti normali) portano inciso, davanti, il numero della serie e il corpo e, dietro, un numero speciale. Se vi è una lineetta sopra il corpo (al posto del numero di serie), ciò significa che quel carattere speciale non appartiene a nessuna determinata serie.

Nota: I numeri speciali si devono leggere partendo dalla base del foro conico della matrice di composizione.

Per ordinare matrici

Quando si ordinano matrici di composizione normale o di larga composizione, bisogna dare il numero della serie, il corpo in punti inglesi (o in punti Didot se l'occhio del carattere è in punti Didot, per es. la serie Univers) e, possibilmente, lo schema del telaio (M.C.A. = Matrix Case Arrangement) con cui si devono usare le matrici richieste.

Quando si ordinano matrici Display, bisogna indicare il corpo in punti inglesi (o Didot, v. sopra) e la serie. Quando si ordinano fregi, bisogna indicare il corpo in punti inglesi e il numero del fregio. Se si richiede un carattere speciale, il Cliente deve indicare il numero particolare di questo carattere, se lo conosce.

Se si ordinano matrici fili bisogna dare il simbolo stampato su di essi nel Campionario. Quando si ordinano matrici fili da usare su una Fonditrice-Compositrice dotata di Apparecchio Fili e Interlinee e Riduttore di Velocità oppure su una macchina unicamente fonditrice, bisogna aggiungere A al simbolo.

Per ordinare matrici speciali

Se si richiedono matrici speciali bisogna dare le seguenti indicazioni:

a) il corpo.
b) le unità.
c) il carattere con cui si vuol usare la matrice speciale richiesta.
d) il disegno (oppure un carattere in piombo in buono stato) e il peso del carattere richiesto (facendo riferimento a un carattere esistente oppure dando le misure dell'asta del carattere in punti inglesi).
e) se si dà un disegno in grande che deve esser molto ridotto, dire se si possono semplificare i particolari.
f) dire se l'occhio del carattere deve essere al vivo del corpo (cioè riempire completamente il corpo) oppure se deve sporgere dal corpo.

LOAN OF DISPLAY MATRICES

'MONOTYPE' DISPLAY MATRIX LOAN LIBRARY

7 Plough Place, London EC4A 1AJ (01-353 9008)

The charges for the hire of Display Matrices (12D-72 point) are as follows:

Full Fount of any one size:	per week	£10.20
	per day	£2.35

Alternative ranging or non-ranging figures can be hired separately as well as alternatively to the figures normal to the fount.

The hire period begins with the morning after despatch of the matrices, and terminates the evening prior to their receipt at 7 Plough Place, London EC4A 1AJ.

Delivery charges are extra (at cost), and the customer pays the return.

The Corporation cannot be held responsible for any delay which may arise in transmission of matrices, or for any delay caused by the casting machine being out of order.

The matrices are despatched ordinary post or passenger train as requested. They should be returned ordinary unregistered post. Customers will be charged full selling price for all matrices damaged by over-heating or any other cause.

Border matrices can only be obtained by purchase.

LOAN OF DISPLAY MATRICES

'MONOTYPE' DISPLAY MATRIX LOAN LIBRARY

7 Plough Place, London E.C.4 (01-353 9008)

The charges for the hire of Display Matrices (12D-72 point) are as follows:

	£	s.	d.
Full Fount of any one size: per week	9	10	0
per day	2	3	0

Alternative ranging or non-ranging figures can be hired separately as well as alternatively to the figures normal to the fount.

The hire period begins with the morning after despatch of the matrices, and terminates the evening prior to their receipt at 7 Plough Place, London E.C.4.

Delivery charges are extra (at cost), and the customer pays the return.

The Corporation cannot be held responsible for any delay which may arise in transmission of matrices, or for any delay caused by the casting machine being out of order.

The matrices are despatched ordinary post or passenger train as requested. They should be returned ordinary unregistered post. Customers will be charged full selling price for all matrices damaged by over-heating or any other cause.

Border matrices can only be obtained by purchase.

When jobs have type sizes fixed quickly margins of error widen unless the determining calculations are based upon factual rather than hypothetical figures. No variation in the amount of copy can affect the degree of error once that error has been made. If instead of the required ten point the estimator specifies nine point for the type size whether the copy be only ten lines for a trade magazine advertisement or a manuscript for a volume of twenty chapters the percentage of error will be ten. If these two jobs were assembled in type one might reasonably expect to find greater difficulty in mitigating the effect of the error where the type content is the larger for with every additional word the degree of variance between 'demand' and 'supply' then becomes more noticeable. However this is not necessarily so, indeed if anything the opposite is nearer the truth, for chapter breaks and an increase of only half a point in the leading can do much to reduce the disparity without unduly "bumping out" the copy or spoiling the book format. In the case of the advertisement we have a different story, the ten per cent error will mean here only

11 PT. (10D) $10\frac{3}{4}$ SET U.A. 43 LINE M·1320

While Caslon had been influenced by the Dutch letter, JOHN BASKERVILLE (1706—1775) broke with tradition and reflected in his types the rounder, more sharply-cut letter of eighteenth-century stone inscriptions and copy books. His types foreshadow the "modern" cut in such novel characteristics as the increase in contrast between thick and thin strokes and the shifting of the stress from the diagonal to the vertical. He realized that his new style of letter would be most effective *if cleanly printed on smooth paper with really black ink.* He built his own presses, experimented with special ink and evolved a method of hot-pressing the printed sheet to a smooth and glossy finish. His types never entered into general commercial use in England until the cutting of 'Monotype' Baskerville in 1923.

This old face design, BEMBO 270, has such an up-to-date appearance that it is difficult to realize this letter was cut (the first of its line) before A.D. 1500. At Venice in 1495, ALDUS MANUTIUS ROMANUS printed a small 36 pp. tract, *Petri Bembi de Aetna ad Angelum Chabrielem liber*, written by the young humanist poet PIETRO BEMBO (later Cardinal, and secretary to Pope Leo X), using a new design of type which differed considerably from that of Jenson's. The punches were cut by FRANCESCO GRIFFO of Bologna the designer responsible six years later for the first italic types. A second roman face followed in 1499 and this type design, based on the first, and used to print the famous illustrated *Hypnerotomachia Poliphili*, was the one which, after adaptation by Garamond, Voskens and others, resulted finally in Caslon Old Face.

5½ PT. (5½D) 6½ SET U.A. 91 LINE M·1235

WHEN THE JOBS HAVE THEIR TYPE SIZES FIXED QUICKLY THE MARGINS OF ERROR WILL WIDEN UNLESS ALL THE DETERMINING CALCULATIONS

When jobs have the type sizes fixed quickly the margins of error will widen unless all the determining calculations are based upon the factual rather than hypothetical figures. No variation in the total amount of copy can affect the degree of error once that the error has been made. If instead of ten point the estimator now specifies nine point for the type size whether the copy be only ten lines for a trade magazine advertisement or a manuscript for a volume of twenty-four chapters the percentage of error will always be ten. Once the jobs have been assembled in type one might reasonably expect to find a greater difficulty in mitigating the effect of the error where the type content is the larger for with every additional word the degree of variance between "demand" and "supply" becomes more noticeable. However this is not necessarily so, indeed if anything the opposite is nearer the truth

When jobs have their type sizes fixed quickly the margins of error will widen unless all the determining calculations are based upon the factual rather than the hypothetical figures. No variation in the total amount of copy can affect the degree of error once that the error has been made

Series 135 was cut by The Monotype Corporation in 1921 and is based upon one of the many types shown in Bodoni's famous *Manuale Tipografico*. Giambattista Bodoni (born at Saluzzo in 1740) came from a family of printers. He served an apprenticeship in the press of the PROPAGANDA FIDE, and later took charge of the STAMPERIA REALE at Parma on behalf of Ferdinand, Duke of Parma. The first founts of type used by Bodoni came from Paris and, though his specimen of 1771 shows the influence of Fournier, his fame rests upon those later designs which set the fashion for that imitation of copperplate effects which appeared in the editions of the eighteenth century. *Bodoni was the popularizer and perfector rather than the inventor of the "modern" face which was then coming into vogue in France. Thus his name and modern type are thought of as synonymous.*

WILLIAM CASLON, born in 1692 at Cradley in Worcestershire, turned to letter-founding after being apprenticed to an engraver of ornamental gunlocks and barrels. There was nothing startlingly new about his designs; he took as his models the best Dutch types of the 17th century, particularly those of Van Dijck. The fact that he started a great era of British typography was due less to his originality than to his competence and ability at engraving and casting types at a time when letter-founding in England was at a very low ebb. *Series* 128, *which is an accurate re-cutting of a Caslon specimen of* 1734, *was begun in* 1915.

Designed by BRUCE ROGERS as a private press type and first used in a translation of Maurice Guerin's *The Centaur* (1916), Series 252 was cut in 1929. Its availability in mechanical composition allowed Rogers to tackle such a large volume as the Oxford Jubilee Lectern Bible. The basis for his design was the roman letter used by Jenson for his Eusebius (1470), one of the most beautiful types of the fifteenth century. *The italic, designed by Frederic Warde, was derived from a Chancery face used by Ludovico degli Arrighi in 1524.*

When jobs have type sizes fixed quickly margins of error widen unless determining calculations are based on factual rather than hypothetical figures. No variation in the total amount of copy can affect the degree of error once that error has been made. If instead of ten point the estimator specifies nine point for the type size whether the copy be ten lines for a magazine advertisement or a manuscript for a volume of twenty chapters the percentage of error will be ten. Once jobs have been assembled in type one might reasonably expect to find greater difficulty in mitigating the effect of the error where type content is the larger for with every additional word the degree of variance between "demand" and "supply" becomes much more noticeable. However this is not necessarily so, indeed if anything the opposite is nearer the truth for chapter breaks and an increase of only half a point in the leading can do much to

12 PT. (11D) 12¼ SET U.A. 67 LINE M·1360

The lettering which we now associate with 18th-century prints has waited until this century to receive anything like a true reflection in typography. One of the foremost French engravers of that time was CHARLES NICHOLAS COCHIN (1715-1791), whose sharp and graceful alphabets were beautifully in keeping with his illustration and decoration. The calligraphic style of his lettering was first transformed into type in a Peignot face of 1912, and Series 165 was cut by The Monotype Corporation in 1927. It is a *smart, aristocratic* face, not always applicable to humdrum printing, but ideal for limited editions, fashion publicity and ephemeral jobs which call out for a display of good taste, luxury and fastidiousness.

6½ ON 7 PT. (6D) 6½ SET U.A. 63 LINE M-1230

When jobs have type sizes fixed quickly margins of error widen unless determining calculations are based on factual rather than hypothetical figures. No variation in the amount of copy can affect the degree of error once that error has been made. If instead of ten point the estimator specifies nine point for the type size whether the copy be ten lines for a magazine advertisement or a manuscript for a volume of twenty chapters the percentage of error will be ten. Once jobs have been assembled in type one might reasonably expect to find greater difficulty in mitigating the effect of the error where type content is the larger, for with every additional word the degree of variance between "demand" and "supply" becomes more noticeable. However this is not necessarily so, indeed if anything the opposite is nearer the truth, for chapter breaks and an increase of only half a point in the leading can do much to reduce the disparity without unduly "bumping out" the copy or spoiling the book format. In the case of the advertisement we have a different story, the ten per cent error will mean here only nine lines of type instead of the requisite ten! A mistake likely to upset vitally the balance of the layout, either by making the "white" masses disproportionate or if the type lines receive extra leading to fill out the type area specified, by robbing the type of "colour" and spoiling the unity of the design in that way. The only way to be sure of making an accurate cast off is to calculate rather than ABCDEFGHIJKLMNOPQRSTUVWXYZ ABCDEFGHIJKLMNOPQRSTUVWXYZ AB

WHEN JOBS HAVE THEIR TYPE SIZES FIXED QUICKLY MARGINS OF ERROR WIDEN UNLESS ALL DETERMINING CALCULATIONS ARE BASED UPON FACTUAL RATHER THAN HYPOTHETICAL FIGURES. NO

When jobs have type sizes fixed quickly the margins of error will widen unless all determining calculations are based upon factual rather than hypothetical figures. No variation in the total amount of copy can affect the degree of error once that error has been made. If instead of the required ten point the estimator specifies nine point for the type size whether the copy be only ten lines for a trade magazine advertisement or a manuscript for a volume of twenty chapters the percentage of error will always be ten. Once jobs have been assembled in type one might reasonably expect to find a greater difficulty in mitigating the effect of the error where the type content is the larger for with every additional word the degree of variance

Series 320 was designed by JOSEPH BLUMENTHAL, the New York printer and teacher. The original version, which was cut from hand-cut punches by the Bauer Foundry in 1930, was called Spiral after the name of the press at which this distinguished typographer produced many delightful illustrated editions. It was re-named Emerson when The Monotype Corporation Limited issued its version in 1935. In an article in *Signature,* Reynolds Stone described it as an interesting experiment. "The intention seems to have been to make the type suitable for photogravure reproduction. This involved a thickening of thin strokes and a blunting of the serifs and all terminals. The designer further seems to have aimed at producing a reasonably light face, fairly condensed, *and at the same time one which avoided the rigidity of a modern face and preserved some of the virtues of the classic renaissance types."*

In 1936 The Monotype Corporation was asked by William Collins, Sons & Co. Ltd. to cut a book face for the exclusive use of this firm of printer-publishers. Dr. GIOVANNI MARDERSTEIG, who founded the Officina Bodoni and has since designed a number of faces including Dante, was called in to advise on the problem. Having decided that a new 20th-century design was in the circumstances inadvisable, he chose to copy a fount cut by ALEXANDER WILSON of the Glasgow Letter Foundry about 1760. In his later types he reflected the influence of Baskerville, and Dr. Mardersteig's adaptation is fairly accurate though he made certain changes, as for example in the slightly reduced height of the capitals.

In 1961 the House of Collins allowed the Corporation to make Fontana available for general use.

When jobs have type sizes fixed quickly margins of error widen unless determining calculations are based upon factual rather than hypothetical figures. No variation in the amount of copy can affect the degree of error once that error has been made. If instead of ten point the estimator specifies nine point for the type size whether the copy be ten lines for a magazine advertisement or a manuscript for a volume of twenty chapters the percentage of error will be ten. Once jobs have been assembled in type one might reasonably expect to find greater difficulty in mitigating the effect of the error where type content is the larger with every additional word the degree of variance between "demand" and "supply" becomes more noticeable. However this is not necessarily so, indeed if anything the opposite is nearer the truth for chapter breaks and an increase of only half a point in the leading can do much to reduce the disparity without unduly "bumping out" the copy or spoiling the book format. In the case of the advertisement we have a different story—the ten per cent error will mean here only nine lines of type instead of the required ten! A mistake likely to upset

also with *alternative Italic* Series 174

12 PT. (11D) 11¼ SET U.A. 37 LINE M·1338

Series 156 was cut in 1922 and the design was based on punches from the Imprimerie Royale, which had acquired an ascription to CLAUDE GARAMOND. Four years later when it was too late to rename this series, the designer was identified as JEAN JANNON, printer to the Calvinist Academy at Sedan. Owing to political disturbances in 1615, he was deprived of his type supplies from Frankfurt and in the space of six years he cut and struck a magnificent range of sizes. Based on Garamond's models, his design is much lighter and more open and characterized by the sharply-cupped top serifs. *The italic is taken from a fount of Granjon in the repertory of the Imprimerie Royale and was probably cut about the middle of the 16th century.*

Combinable with **Gill Sans Bold** Series 275

11 PT. (11D) 10¼ SET U.A. Roman 82 Italic 311 LINE M·1327

Gill Sans made its first appearance before the printing industry in 1928 in the programme of the *Federation of Master Printers' Conference*. This was the titling, Series 231, which had been commissioned by The Monotype Corporation Limited from Eric Gill, and was based on an alphabet used by Gill on the facia of a Bristol bookshop. Lower-case letters soon followed and related bolds, titlings and other variants were added from time to time until the Gill family contained some twenty-four series. Gill's design followed but was not in any sense an imitation of the more theoretical, geometric sans serifs of German origin. The normal shapes of the a, g and t are retained, and the readability gained is further enhanced by the imperceptible gradations of thickness in the characters that curve.

5 PT. (5D) 5 SET U.A. 346 LINE M·1155

When jobs have type sizes fixed quickly margins of error widen unless all the determining calculations are based upon factual rather than hypothetical figures. No variation in the amount of copy can affect the degree of error once that error has been made. If instead of the required ten point the estimator specifies nine point for the type size whether the copy be only ten lines for a trade magazine advertisement or a manuscript for a volume of twenty chapters the percentage of error will be ten. If these two were assembled in type one might reasonably expect to find much greater difficulty in mitigating the effect of the error where the type content is the larger for with every additional word the degree of variance between "demand" and "supply" becomes more noticeable. However this is not necessarily so—indeed if anything the opposite is nearer the truth—for chapter breaks and an increase of only half a point in the leading can do much to reduce the disparity without unduly "bumping out" the copy or spoiling the book format. In the case of the advertisement we have a different story—the ten per cent error will mean here only nine lines of type instead of the requisite ten! A mistake likely to upset vitally the balance of the layout either by making the "white" masses disproportionate or if the type lines receive extra leading to fill out the type area specified by robbing the type of "colour" and spoiling the unity of the design in that way

11 PT. (10D) 9¾ SET U.A. 4 LINE M·1433

GLOUCESTER is the equivalent among 'Monotype' faces of CHELTENHAM, designed by the American, Bertram Goodhue, in 1896. It was introduced into England in 1902, and the first size of Series 99 was cut in 1911. While it is no longer used for distinguished printing, it has certain properties which have prevented it from disappearing from the typographic repertory. Because of its weight and its space-saving advantages, it is still used for display work, specially in newspapers. Its simplicity of construction and the absence of fine hair-lines make it a type which prints well on any kind of paper, *and it can be used for jobs where a high standard of presswork is not anticipated.*

ABCDEFGHIJKLMNOPQR

12 PT. (11D) $11\frac{1}{4}$ SET U.A. 87 LINE M·1290

Amongst the many different type faces designed by FREDERICK W. GOUDY, this is perhaps his *most distinguished contribution* to the range of classic book faces. Though avowedly based on a Bodoni design, it owes its effectiveness to its freedom from extremes. The thin strokes have been thickened until their weight merges into that of the thicks, making the face unusually rich in colour. The weight is so disposed that although the letters are condensed they appear round and open. The bracketed serifs are a modification of the characteristic "modern" form and do not dazzle the eye with their sharpness.

Combinable with **Goudy Bold** Series 441

11 PT. (11D) $11^{1}/_{4}$ SET U.A. 312 LINE M·1407

FREDERIC WILLIAM GOUDY, who died in 1947 at the age of 82, designed more than a hundred different type faces, amongst which his Goudy Old Style has had a strong influence on American periodical and publicity style. He began his career as a book-keeper in the Middle West of America. The sight of some newly-published works of the Kelmscott Press determined him to devote his life to lettering, type design and printing, and he helped to bring understanding of the new movement of William Morris to printers in the U.S.A.
Series 291 has the smoothness and evenness of colour and generous width of curves, which are found in most of the designer's best faces.
